All of these will provide a nice, intuitive way to get your video monitoring up and running. x Highlights Easy to use – MyDMX software is very easy to use. I found it very intuitive to use. It is also the cleanest software I have used. Data logging – I was able to set up myDMX to log data and easily view it via the Web GUI. I was also able to view the data live via my remote Windows PC. Capture from the program – The capture mode of MyDMX was simple to set up. It allows you to grab video from a particular frame, or a sequence of frames. What's New MyDMX v7 Fixed a crash bug with the new export panel of MyDMX 7. PC: Steam updates are very annoying and hard to get right. It was very annoying to find that the MyDMX main menu was not updated when I installed the Steam client. So, I had to uninstall Steam. After that, I was finally able to install the latest Steam Beta client. After installing the new Steam client, the MyDMX main menu is now in sync with the Steam client, and allows for the automatic update of MyDMX when you play a Steam game. Linux: The official Linux client is now available. Unfortunately, there is a bug where the 'Live View' shows a blank screen. For now, the software is usable on my Ubuntu system but it is obviously not officially supported by the developer. Mac OSX: The Mac version is still not available. Change log Version 7 - The application is now distributed with a free, auto-update Steam client. This allows you to always have the latest MyDMX version, without having to download the installer, and re-install the application every time Steam updates. - The application now displays the number of frames per second (fps) in the application status area. - The new Steam game update version also updates the application. - The capture mode has been overhauled. Now you can pick a particular frame, a sequence of frames, or a time interval, among many other options. - The capture mode now shows a preview of the frame in the user interface. - A warning message now indicates if the frame can't be captured, or if the output resolution is wrong. - Now you can set the 82157476af
